Awards
Euromoney «Best Bank in Luxembourg 2015»

BIL, founded in 1856 and the oldest universal bank in Luxembourg, is resolutely turned towards the future, with a clear focus on innovation and client satisfaction. Deeply rooted into Luxembourg's economic and social fabric, the bank is committed to offering relevant and innovative products and services for its diversified and high end private, professional or institutional clients in Luxembourg as well as in selected international markets in the field of wealth management. It has a local presence in a variety of other countries: Switzerland, Denmark, Dubai and Sweden. BIL's 2000 staff members share a common goal of building relationships of trust with all of our stakeholders and supporting our clients with their projects by offering quality services that generate long-term value. The bank is co-owned by Precision Capital, a bank holding company owned by Qatari investors, and the Grand Duchy of Luxembourg, one of the two countries in the euro zone still to have a AAA rating as assigned by S&P, Moody's and Fitch and of increasing interest to the Chinese international banking sector. The Grand Duchy views BIL as a bank of strategic importance and has committed to consolidating BIL's position as a key player in the financial services sector.

Docler Holding is a multinational enterprise which counts more than 1000 employees worldwide.

Created in 2001 and powered by the ideas and visions of young and enthusiastic Hungarian entrepreneurs, today Docler Holding boasts worldwide reach and a global presence. The Group develops and operates world leading websites in the live streaming industry and has also created a large number of highly diversified companies which experience ongoing growth in the fields of ICT, media and entertainment.

The group was built on the idea of creating unique, exciting and fun services, but it became more - a vision about a brand new way of thinking ready to meet the challenges of the future.

"The driving force behind all our actions is creativity and innovation; regardless of what we are creating - be that a website, a movie, a luxury shopping mall or any other investment - this is what has helped us the most to leave behind the label of being just another «dotcom» (despite of being the main operator of one of the most visited websites in the world), and to extend our horizons to the mainstream media and other current business fields". Gyorgy Gattyan, founder & owner

At ICTSpring, on booths J1 and CCC, you will discover our different brands and projects: Elvoline, our online hotel booking platform; Teqball, an alternative and new way of playing sports; Oranum, our livestreaming platform with psychics and fortune tellers, and Escalion, our e-payment gateway.

Awards
2016: Best Cloud Transformation Methods/ Best Workplace Luxembourg
2015: ajouter: Best Cloud Transformation Methods/ Cloud Provider Europe
2015: Uptime Institute Brill award for efficient IT, Data Center Facilities Management category, EMEA / Best Workplace Luxembourg

EBRC is leader in the management of sensitive information by guaranteeing a unique "One-Stop-Shop": Trusted Services Europe.
The company has a strong business experience in the e-Payment and Financial markets and provides a full range of services, from Advisory Services to the full management of applications.

Trusted Advisory Services
Guidance and Advisory in the management of ICT Risks and Outsourcing.

Trusted Managed Services
End-to-end management of sensitive ICT infrastructures, from the architecture design and the implementation to the daily operations and future developments.

Trusted Cloud Europe
Flexible infrastructure management through Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) service models as well as Trusted Back-up & Restore Services.

Trusted Security Europe
EBRC "Trusted Security Europe" and its "Managed Security Services" (MSS) enable Clients to focus on their core business while we take care of their IT infrastructure and the related threats to data and communication.

Trusted Resilience Services
Design, implementation and management of Business Continuity solutions coupled with the management of ICT Security based on resilient infrastructures.

Trusted Data Centre Services
Full Data Centre Services based on redundant Tier IV certified infrastructures for highest security and availability.
In the framework of the PFS status, EBRC meets the requirements of the CSSF, and is therefore allowed to operate ICT services for banks, financial institutions and investment fund companies. These qualities and security requirements are considered as best practices within EBRC and are to be met for any client managing sensitive information (e-Payment, e-Commerce, BioTech & Health, international institutions, public sector, industry, SMB, gaming, etc.)

Awards 2014 & 2013
2014: Cloud & Managed Services Provider of the Year / Best Cloud Service for the Public Sector / Best HealthCare Advisory Firm –IT, Organisation & Operations / Best Workplace Luxembourg Outstanding Contribution to Luxembourg ICT / Green IT Award

2013: ICT Company of the Year Managed Services Provider of the Year / Best Case Study Example of Cloud Services for the Private Sector / Best Case with TrustedCloudFactory

EBRC Trusted Partners welcome you at ICT Spring 2016

EARTHLAB – INNOVATION FOR BETTER RISK AND INSURANCE MANAGEMENT

Sparking a revolution in data centres, EarthLab and EBRC have started their conquest of the world of risk analysis and management.
At the intersection of Big Data, ICT and the exploitation of Earth observation data, EarthLab Luxembourg develops solutions and services for the prevention and management of industrial and natural risks, with the support of EBRC and InTech.

In the geo-information sector, the technological capabilities developed by industrial companies are mostly being marketed to institutional clients. Based on this observation, Telespazio, a major player in the field of Earth observation and the operation of satellite systems, chose to take a different approach to approach other economic players. This new approach, which is built around customer requirements, is the origin of the creation of the EarthLab Galaxy by Telespazio France, a geo-information cluster with global ambitions, involving research centres and operational service units.

EarthLab Aquitaine was born in 2013 in Bordeaux with the aim of monitoring the Landes forest, the Aquitaine coast and, of course, the Bordeaux vineyards. A year later, Telespazio created EarthLab Gabon.

Luxembourg, an ideal socio-economic fabric

While looking for a new governmental partner to develop the activities of EarthLab at the European level, Telespazio was seduced by the strong interest shown by Luxembourg for companies operating in the Earth observation sector: in June 2015, EarthLab Luxembourg was created with the support of the government. POST Luxembourg has a stake in the start-up and the young company is setting up partnerships with various companies of the POST Group, including EBRC and InTech.

«We immediately benefitted from the confidence of all Luxembourg players,» recalls Florian Karner. «In Luxembourg, we found an ideal socio-economic fabric: ICT specialists of the highest level, a historic leader of the European space industry, strong government support and research centres at the forefront of technology.»

«EarthLab Luxembourg has chosen to focus its efforts on two objectives,» says the director of the startup. The first is about environmental hazards and the second is industrial risk, risk that threatens or emanates from an industrial site.

A new paradigm

«EarthLab does not sell images,» explains Florian Karner: the start-up creates value by integrating structured data and unstructured data. «We start with the needs of our partners and then develop a solution which involves Earth observation, but that is not always necessary: it can also be information from temperature sensors, air and water quality measurements, weather forecasts, and all of that is integrated to create tailormade products for the customers of EarthLab Luxembourg,» explains the General Manager of the company.

«Our approach is to create the service that the client needs, regardless of the source that was used to create this service,» adds Benjamin Hourte, Chief Technology Officer of EarthLab Luxembourg. «Our goal is to integrate as much data as possible to increase relevance. That's why we had to adopt a new paradigm: the data we are talking about is characterised by very high velocity and extremely large volume. It has a spatial dimension but also a temporal one".

To solve the challenges posed by the large volume and velocity of the data, EarthLab Luxembourg had to acquire new technological foundations that allow it to remain flexible while still being able to integrate new services. «We use technologies that have been developed by Twitter, LinkedIn, or Airbnb,» says the CTO.

«We have invested in technology infrastructure hosted at EBRC,» adds Florian Karner, «a company that we have chosen for the quality of its services, and a resilience and security profile that is unique in Europe: our clients are industrial and insurance groups whose data represents a very sensitive asset.»

Awards
- 2015
  Telecom Provider of the year
- 2014
  Telecom Provider & Mobility Solution of the year
- 2013, 2012
  Best Telecom & Internet Innovator of the year
- 2007, 2008, 2009, 2010, 2011
  Best Telecom Services Provider of the year
- POST Telecom PSF (PSF since 2008)

POST Telecom, branch of POST Luxembourg, provides high quality services from fixed and mobile telephony, internet and television to fully integrated ICT solutions and business applications. POST delivers these services through its own infrastructures and datacenters, enabling the company to provide secure connectivity solutions, voice services, M2M & IoT managed connectivity and applications, as well as data management and ICT & Cloud solutions to individuals and businesses. POST Telecom's solutions, services and products can also be delivered to clients under PSF status.

Datacenters are connected through TERALINK, POST's broadband network, linked to several major European cities.

POST Luxembourg is continually investing in its infrastructure, making of the company one of the most modern service partner in Europe. Its mobile network offers its private and corporate customers all the comfort of 4G services and roaming agreements signed with 199 countries up-to-date.

Customer satisfaction is the number one priority of the company, which aims to consistently deliver innovative products with a high level of service. Business customers benefit from a dedicated, flexible and skilled team to allow them to focus on their core business without having to worry about ICT issues.

To make the life of their customers easier, POST Telecom has focused its priorities on:

- Cloud & ICT
- Network & Connectivity
- Security & MDM
- Voice & Collaboration
- M2M / IoT

Aware of the fast changing ecosystems, whether fixed, mobile or ICT, POST Luxembourg offers a one-stop shop that meets all its clients' requirements. Today, 80 people are dedicated to the professional market in the sales team.

Our solutions are evolving with your needs, making your business life easier.

CYBER SECURITY AND THE INTERNET OF THINGS AT THE HEART OF POST'S DEVELOPMENT STRATEGY IN 2016

In 2016, POST Luxembourg is highlighting two themes at ICT Spring: cyber security and the Internet of Things (IoT). Both areas are part of POST Luxembourg's development strategy. Since 2015, POST has been developing its service provider operations both «on premises» and in «Managed» and «Unmanaged» mode - that is, operated by POST as opposed to «customer operated» on completion of the rollout.

«We have improved our expertise and our production capacity in these areas, particularly through the recruitment of new staff, both in terms of engineers to ensure the rollout of the solutions and in terms of support to operate the systems once installed.»
explains Cliff Konsbruck, Director of POST Telecom S.A.

In parallel, the development of Cloud services and solutions is still relevant. POST is currently the only provider to offer a comprehensive portfolio of solutions allowing customers to outsource all or part of their IT environment, regardless of their size or their needs.

«Our positioning as a local partner is very important in the field of Cloud solutions. A customer who decides to outsource all or part of its IT is in some way handing over the keys to its house to its service provider; it is crucial to establish a relationship of trust. This is why our experts support our customers in every step they take towards outsourcing their infrastructure to the Cloud.»
observes Cliff Konsbruck.

The proposed solutions can meet all the telecom and ICT needs of business customers such as SMEs/SMIs, which often lack the internal resources and skills for them to effectively address these issues themselves.

POST is working on standardising the rollout of its virtualisation solutions in order to make the transformation of the customer's environment as fast as possible.

In 2016, we are also keen to continue strengthening synergies with the subsidiaries of POST Group.

With regard to Cloud and security offerings, for example, POST works with EBRC. The Cloud solutions that this company offers are based on Tier 4 data centres belonging to its subsidiary and provide a guarantee of quality. POST works with this subsidiary for projects related to the field of information security. More specifically, EBRC provides the compliance and consulting part of these projects alongside the security services, systems and solutions deployed and operated by POST. The proposed solutions are as much security offerings for our Cloud products as they are security products to make our customers' environments safe.
POST Telecom also makes use of the skills of its subsidiary InTech in the area of the Internet of Things and Machine to Machine (M2M). The operator also has two strategic partners: Jasper and SigFox, via national partner RMS.lu. This ecosystem provides POST with all the expertise needed to conquer the Luxembourg market in areas such as: Smartcities (car parks, street lighting), SmartDriving or even insurance telematics.

It is along this axis that POST is positioned internationally and on which it develops its activities outside Luxembourg, under the brand name TERALINK Solutions.

Tango is Luxembourg's leading operator offering both fixed and mobile telephony, Internet as well as TV. With a wide portfolio of products effectively tailored to meet the needs of all of the company's general public and business customers, Tango is now the first choice for more than 288,000 customers.
Since starting out in 1998, Tango has pursued a policy of innovation which has helped to find the right responses to the company's customers' needs in terms of quality of service at the best possible price. Thanks to this policy, Tango was the first mobile player in Luxembourg to launch 4G+ in December 2014.
Tango has been a member of the Proximus Group since 2008, thus giving the company even more of an international dimension.Together with Telindus Luxembourg, a Proximus subsidiary and ICT specialist, Tango continues its development of the B2B sector.
The partnership concluded with Vodafone allows Tango to offer highly competitive rates for calls made from abroad, along with a wide range of offers and cutting-edge services.

Telindus is the Proximus Group's ICT branch and, through Telindus Telecom, the Group's enterprise operator in Luxembourg. It provides
solutions to a variety of private and public sector companies. Its areas of expertise include enterprise networks and connectivity (national and international), datacenters, systems, storage, security, collaboration, applications and mobility.

With a customer centric approach, Telindus Luxembourg positions itself as privileged partner for businesses and administrations in Luxembourg. In order to accompany its customers in their digital transformation, at their own pace, with the highest respect for their evolution, Telindus developed a wide range of managed services to meet their very specific needs. With more than 400 accomplished specialists, Telindus Luxembourg's strategy is to focus on customers' needs managed through a single point of contact to meet overall ICT requirements.

Telecom operator since 2009, the ICT market leader launched its operator brand Telindus Telecom in May 2011 and evolved into the reference player for a full-service solution offer including fixed and mobile telephony services, networking, internet and cloud computing. As an expert in both telecommunications and ICT, Telindus Telecom is able to offer the best of both worlds to its clients, which is a real competitive advantage in the current telecom market.

To deliver its cloud solutions, Telindus is equipped with a high-performance datacentre environment within the infrastructure of LuxConnect.

Telindus Telecom offers the following innovative cloud products and services: Telindus Telecom U-cloud is the Luxembourg's first global cloud solution in self-service mode, allowing businesses to create for themselves a real virtual datacentre by means of a simple Internet interface. Whether requirements are for running production facilities or carrying out tests and developments, whether permanently or temporarily, and wherever you are in Luxembourg, Telindus Telecom U-cloud will respond perfectly to the request.

Telindus Telecom U-flex: IaaS (Infrastructure-as-a-Service) solutions. It identifies infrastructure service solutions using the cloud, offering companies, a completely flexible and investment-free ICT service, providing them with complete control over operational costs and a guaranteed superior-quality service.

Telindus Telecom U-touch: CaaS (Communication-as-a-Service) solutions, telephony, unified communication and video collaboration, on a flexible, secure and high-performance platform.

Telindus Telecom U-free: DaaS (Desktop-as-a-Service) solutions. With virtualization, businesses and end-users get rid of the complexities of managing their pool of PCs and laptops.

Telindus Telecom U-share: (Collaboration-as-a-Service). Powerful file-sharing solution that enhances mobile business productivity, collaboration and ensures data security.

Datacenter Luxembourg is an Internet Service Provider member of the DCL Group and operating out of Luxembourg.

The company was founded in 2000 by two ICT driven and innovative entrepreneurs; Xavier Buck and Marco Houwen.

Datacenter Luxembourg offers reliable datacenter infrastructure, international Internet and telecom connectivity, IP Transit, cloud services, managed e-Commerce, colocation services and BGP Management.

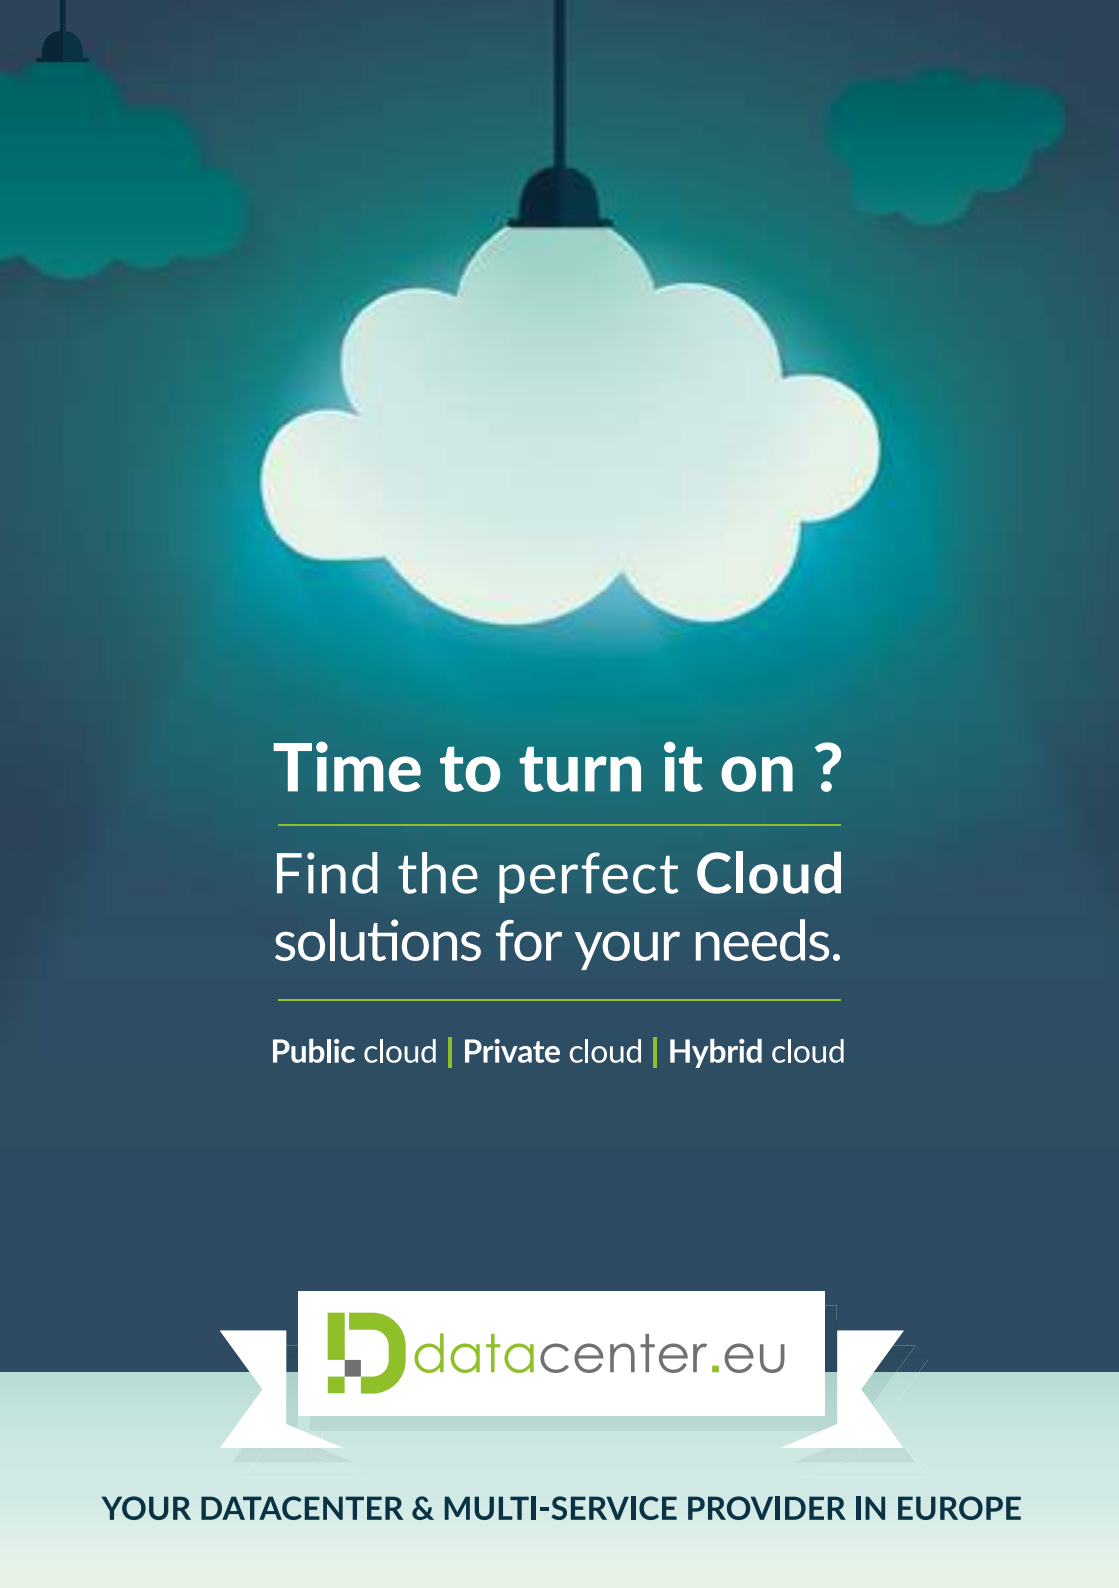

At the forefront of the industry for more than fifteen years, Datacenter Luxembourg provides a unique offering of multi-tier datacenters, from Tier II to Tier IV, using high quality materials and green energy, in line with our core values.

Companies which want to achieve economies of scale, reduce spending on their IT infrastructure, secure their data, beneficiate of a full OPEX model and flexibility can take advantage of our Cloud computing solutions.

From our public Cloud, with its virtualized environment, into shared infrastructure resources, which allows important costs 'optimization, to our private Cloud model built on a virtual and/or physical infrastructure dedicated exclusively to your organization and through our hybrid cloud solution in which resources are provided and managed both in-house and externally, beneficiate to the solution that suits the best with your needs and expectations.

In addition, our network is linked to the major Internet backbones, with connections to hundreds of exchange partners. This allow us to provide high speed, low latency and redundant Internet access. For instance, we have 500 Gb of IP Transit capability, which allows our client to be sure that their business will be as efficient as they want.

All our team of high skilled and certified engineers help you in the definition of your project, in the delivery and in the follow up with our support dedicated team.

Within the overall framework of communications, the telephone remains essential. MIXvoip provides an inexpensive, reliable and highly flexible offer, in creating, developing and hosting in the Cloud a PBX of thousands of users. MIXvoip provides innovative VoIP telephony solutions for all type of companies, large and small. MIXvoip's Cloud Telephony service and business solutions are customizable to the specific needs of each customer.
The use of Voice over IP is synonymous of flexibility and reliability, real time call routing, interactive voice menus, simple administration, and professional support. Each MIXpbx only takes minutes to be up and running.
With now more than 1000 customers having chosen MIXvoip, the company has the capacity to offer its services to large users, and is proud to supply telephony solutions to major players and well established companies in the Grand Duchy. But even more, MIXvoip can offer the same level of service and adapted solutions to small companies, within the frame of profitability. Due to a high scalability, MIXvoip is the favourite telephone provider among startups and growing businesses. All praise the quality of service, and outstanding technical team made of proper IT engineers dedicated to customers and the proximity of a luxembourgish company.
Small is beautiful. But it's not enough. To find a place to exist among the major players, a startup needs to offer something new! Through the years, MIXvoip has developed its MIXpbx hosted in the Cloud, mobile integration and a SIPtrunk solution. We monitor in real time all traffic thanks to specifically optimized and developed applications.
This technology is now fully integrated in disaster recovery plans of some prominent customers in the financial sector.

Sungard Availability Services has 35 years of experience providing flexible availability services that help ensure organizations keep applications always on, always available. The company leverages its proven expertise to provide managed IT services, information availability consulting services, business continuity management software and disaster recovery services to clients in North America, Europe and India.
Sungard Availability Services helps customers improve the resiliency of their mission critical systems by designing, implementing and managing cost-effective solutions using people, process and technology to address enterprise IT availability needs.

Our strategy Cloud
Sungard AS offers a full range of solutions based on the cloud model, since virtualization, backup and replication to providing Infrastructure as a Service (IaaS), with public, private or hybrid cloud offers, managed or self-service.
Sungard AS also offers Recover2Cloud, an accelerated recovery solution of physical and/or virtual x86 environments via a replication of systems, application of the set data in the cloud entirely managed by our experts.

It's simple: IT is complex

So there's only one way forward.

Modern business demands on IT are increasingly complex. Today's hybrid IT environments have to deliver the right mix of services, technology, vendors and processes to support the unique needs of your business.

Such diversity creates complexity.

Sungard AS provides an approach that's as personal as your business requirements – helping combat the wide range of challenges your company throws at you, from legacy to cloud and resiliency to continuity. Helping you to adapt and deliver the business outcomes which are right for you.

- Italie: Certifications ISO 9001 et ISO 27001.

Créée en 2006 par Colony Capital, DATA4 est le spécialiste européen de l'hébergement ultra-sécurisé de données, propriétaire et opérateur de data centers pour le compte d'entreprises françaises et internationales issues du numérique, de l'industrie, des services ou de la bancassurance, souhaitant externaliser leurs données. DATA4 opère treize data centers en France, en Italie et au Luxembourg, pour une superficie globale de 22.000 m² de salles informatiques et plus de 30MW de puissance IT, dont le campus de Paris. DATA4 fonctionne selon une approche verticale : DATA4 finance, designe, construit et opère ses propres data centers dont il est entièrement propriétaire. Le groupe propose ainsi des solutions data centers flexibles, capables d'évoluer en fonction des besoins de ses clients, performantes, sécurisées et neutres vis-à-vis des opérateurs télécoms et des fournisseurs de cloud. DATA4 dispose de la plus grande réserve foncière et électrique de France et d'Italie pour assurer le développement de ses infrastructures.
Depuis 2003, les data centers DATA4 sont situés stratégiquement à proximité de Luxembourg-Ville, hub Européen des Internet Exchanges (Paris, Londres, Amsterdam, Francfort).
Le Groupe peut ainsi garantir une offre d'hébergement hautement sécurisé et redondant_100% de disponibilité, niveau Tier II ou Tier IV _ au sein d'infrastructures résilientes et hyper-connectées connectées à Lu-CiX et près d'une trentaine d'opérateurs télécoms.
DATA4 Luxembourg opère 1 500m² de surface informatique en salles blanches pour une puissance IT opérée de 4 MW.

Our solution, the «Timi Suite», is a game changer for organizations that are ready to use their data as a competitive advantage and capture value from their information universe. Timi revolutionizes data science and advanced analytics by tackling four of the key barriers to entry:
1. SPEED: Timi is simply unbeatable: in seconds, it builds thousands of models and automatically selects the most robust and accurate ones.
2. LEARNING CURVE: Savvy business users are able to build robust and accurate models with a very short learning curve, and without needing an advanced degree in data science.
3. INFRASTRUCTURE: Timi lowers the operating cost by allowing modeling on billions of records and thousands of variables on one simple commodity PC. Using in-chip analytics, Timi is also the most scalable solution available.
4. STORAGE: using a proprietary compression technology, Timi can store vast amount of data. The data size is typically divided by 10 compared to a simple flat file storage or by 50 compared to a traditional database. This means that we can manipulate a 5 TB data base using only 100GB space on the laptop's HD.

Altough our tools offer a general purpose solution for every «advanced analytics» needs, we also have a set of dedicated solutions for Telecoms, Banks, Large Retailers and insurance.

The key differentiator is that you can operate on very large quantities of data using a very small infrastructure. A lot of other Big Data solutions require you to invest in hundreds of PCs, which is a big investment in hardware. Our solution, on the other hand, can be installed in just one laptop (for the same processing power). This is a huge financial benefit for our customers, and is one reason our products are so successful in Africa.and Latin America: We are processing daily more than 300 millions people with our tools on these continents. Another unique selling point of TIMi is that we are able to create extremely precise predictive models in a few minutes instead of, typically, a few months.

Awards
- Accenture Innovation Awards for Financial Services BELUX: Jury prize winner (2012)

JEELIS provides a white-labelled digital payment authorisation stack, fitting neatly into banks', PSPs' and merchants' infrastructures, using existing underlying payment channels (transfers, cards ...) and smartly connected to retailers' POS and e-commerce systems. It is fully user experience focused, effectively integrating value-added services, for both proximity and remote payments. A customisable multi-technology device (the Beacon) for payment acceptance at the POS can be provided on top, as well as a nifty payment terminal integration and a full set of APIs/SDK for banks and merchants.
Since 2012, the JEELIS team built the Luxembourg retail banks' digital payment product and hub under the DIGICASH brand that is operated by Digicash Payments SA. The DIGICASH ecosystem is today one of the most advanced and successful fully digital consumer payment infrastructures in the world.
Based on this know-how, JEELIS delivers premium technology to bring payment businesses to the next level and enhance existing infrastructures, to create new ecosystems and seamlessly integrate custom banking, marketing or retail-centric features and products. Its platform has already been implemented by 4 banks and is live since 2012. It serves as the backbone of the Luxembourg banks' mobile payment ecosystem
Its latest project is the design and implementation of the «Luxembourg Open Scheme for FinTech». The project's goal is to create an open digital scheme for financial services in Luxembourg as a framework for interoperability of different stakeholders in the financial sector and outside: establish a distributed network that enables participants to exchange information in a standardised way to allow them to aggregate specific data from different sources and hence be able to provide new, personalised services based on that data. It aims at establishing a framework for mutual authentication, generic communication protocol specifications and a distributed framework for digital ID aggregation (distributed Meta-ID), including APIs, protocol and connector normalisation based on existing standards, self-certification tools and a full sandboxing environment.
JEELIS is based in Luxembourg, a Top 10 global financial centre and payments innovation hotspot. The company is fully owned by its founders. Its sister company Digicash Payments holds a full EU Payment Institution license.

ILNAS (Institut Luxembourgeois de la Normalisation, de l'Accréditation, de la Sécurité et qualité des produits et services) is the Luxembourg's National Standards Body which aims to better support the national economy in terms of competitiveness, visibility and performance; promote a homogenous standardization culture at national level; improve the international position of Luxembourg in standardization organizations and launch an innovative and federative way for the national standardization process. ILNAS, with the support of the Agency for standardization and knowledge-based economy (ANEC GIE), offers different services such as searching and ordering standards, getting involved in standardization, evaluating the level of knowledge in standardization, organizing training courses, conducting standard watches, developing sectorial standardization approaches and informing on research projects related to standardization.

LUXEMBOURG – SLOVENIAN BUSINESS CLUB LSBC

Iztok PETEK
Chairman of the Board
iztok.petek@lsbc.lu

Natasa ZAJEC
Executive Director
natasa.zajec@lsbc.lu

Foundation date
01.04.1976

Staff
2,600 employees working in 87 offices in 49 countries

Certifications
Affiliations and Partners: Public Agency SPIRIT Slovenia, The Ministry of Economic Development and Technology, Republic of Slovenia, Chamber of Commerce Luxembourg, SDBP – Slovenian Dutch Business Platform

Awards
- In 2014 LSBC received the recognition from SPIRIT Slovenia as one of the most successful Slovenian business clubs abroad, LSBC is an official partner of the Chamber of Commerce Luxembourg for »b2fair matchmaking« events

Luxembourg – Slovenian Business Club LSBC offers access to a unique network of business people, interested in innovations, new technologies, sustainable development, social entrepreneurship, etc.
About LSBC

A non-profit organization with registered seat in Luxembourg was established in 2012 by a group of businessman and entrepreneurs from Luxembourg and Slovenia. Today LSBC's network connects more than 1000 companies and individuals from all over the globe. We are using advanced networking methods which result in an emerging community of cross-regionally operating and collaborative-minded entrepreneurs.

"Since the beginning of our cooperation we found them as energetic, goal-oriented people. Thanks to their support we welcomed a strong delegation at the GR Business Days 2014 for the first time which served as a good opportunity to strengthen relations between SMEs from the two countries." Sabrina Sagramola, Head of European Affairs, Member of the b2fair Management Board
Chamber of Commerce, Luxembourg

LSBC at the ICT Spring 2016:
The first presentation of Slovenian Tech Companies at this big event. Meet international companies with a proven business track, active in the fields of FinTech, Cybersecurity, SpaceTech and Analytics:
- Comtrade is a leading IT company in the region with offices in 11 countries across Europe and North America with special focus in providing FinTech & Cybersecurity solutions.
- Analitica expertise is in integration and cleaning of data sources and transforming data into information.
- The latest R&D of Slovenian SpaceTech Industry: Telemetric software, developed by company Dewesoft, was used in every Space Shuttle mission since 2008, Slovenian companies are partnering with CERN & NASA, SkyLabs provides small footprint, flexible, fault tolerant processor core – targeting miniaturized subsystems for lowering overall system costs and develops nanosatellite for multispectral imaging

Joining the stand will be ProNewTech, LSBC partner from Luxembourg and ICT Green Award 2015 winner - ProMeeN was validated across 4 demonstration projects concerning renovation.

Telecom Luxembourg Private Operator S.A. is a private operator based in Luxembourg, offering Data centre and connectivity services, with underlying networks operating on an optical fibre infrastructure. Telecom Luxembourg Private Operator also offers a full range of managed services aimed at professional customers and international telecom operators. In December 2014, Telecom Luxembourg Private Operator has launched Luxembourg Web Services (LWS). Luxembourg Web Services is a powerful, secure and the first "Public Cloud" 100% hosted in Luxembourg. LWS is a platform that allows you to greatly simplify complex engineering problems while deploying applications, written in different programming languages (Java, PHP, Ruby, Python, Node. js, and others), into the cloud. More specifically, to build a scalable complex environment, with just a few clicks. At present, the engineer needs to know how to build a highly scalable environment, but not necessarily do it manually. Our platform lets developers focus on creating an application and not worry about buying servers, setting the environment, configuring OS, application servers and databases, about downloading code or other administrative tasks. LWS provides greater flexibility for developers and thus leaves open the possibility for the administrator to control the application lifecycle and infrastructure changes. In other words, LWS today is a hybrid solution that provides the capabilities of platform and infrastructure simultaneously. In addition, we have advantages that other Platform-as-a-Services do not have – automatic vertical scaling, complete isolation of resources due to very efficient container virtualization, almost no restrictions while working with the file system, ability to migrate applications between servers without stopping containers and much more. Why did we make such a hybrid solution? Because people want both of them (platform and infrastructure) to solve their problems.

SMART.

LUX FUTURE LAB

Olivier SELIS
Manager
info@luxfuturelab.lu

Lux future lab's goal is to positively impact the social and economic dynamics of Luxembourg. It is our belief that the root of positive change lies first and foremost with education and entrepreneurship. We know that when entrepreneurs succeed, we all win. By fostering the innovative ideas of some of the region's brightest minds we are turning potential into lasting economic change.

Lux future lab's portfolio includes some 30 promising startups that belong to a variety of different technological sectors including digital security, financial services, travel, intellectual property, software development, social networking, IoT & Big Data, electronics games, robotics, gaming and more. Major FinTechs have chosen lux future lab, due to the fact that the lab is located in the heart of Luxembourg's financial district and powered by BNP Paribas one of the world's largest and most innovative financial groups.

Our not-for-profit incubator is fully equipped to support an array of diverse businesses in the early stages of their growth journeys. Besides hosting we offer training, coaching and a privileged access to some of Luxembourg's best specialists in law, corporate finance, accounting, tax, marketing & IP issues.

We also believe that BNP Paribas' international network and culture for innovation is a great asset for our start-ups. We are wherever a start-up wants to go, we host incubators or technology watch companies in all major start-up hubs and we are increasingly developing interaction and business opportunities between our start-ups, our various business lines and our corporate or private clients. Please join us on our booth at ITC spring.

Come and meet some interesting start-ups in regulatory issues: Global Compliance, in social media: PingValue and in in e-payments: SnapSwap and EmpCorp.

PASSIVE JOB SEEKERS AREN'T SO PASSIVE ... BY GILLES CAVALLARI

Passive job seekers are abundant on the market, even if they remain hard to identify. Every day they use their knowledge and skills but don't spend time promoting their talents. Passive job seekers are less concerned about keeping their CV updated and having it online and when they do choose a new professional challenge it's commonly by association.

They are skilled, have a job they are satisfied with, and have unlikely considered a possible change. But, an unexpected opportunity corresponding to their ambition or desire for a promotion may very well convince them to make a move. Passive job-seekers are in demand, but are rarely engaged in an efficient way

This is also on this premise: having accessibility to an un-used candidate pool, that Monster has successfully leveraged social media as an HR recruitment resource. If passive job seekers are not actively searching on jobsites, they may also be less inclined to update their social media profiles. Yet this quantity of information, on the age of the Big Data, is the real fuel of the analysis tools demanded by recruiting professionals.

This critical mass of information, passive seekers will share it on global social media, or in some specialized blogs and forums. It's where they will spend most of their time online. So it's where we should seek and exchange with them. Most of them use online activity as a way to monitor the market they are actually working in; they can also use it to debate around ongoing projects. It's a true gold mine for recruiting professionals; unfortunately it's infeasible for the vast majority who are lacking time. Only an automated process of those terabytes of information will allow a useful synthesis.

Whether it's Semantics, Big Data... The technology is the answer to the recruiter's needs, Monster always does it. Today, Monster takes another step forward by providing the most successful solutions available on the market, to help profile seekers, contact and recruit them where they really are.

Therefore Monster Social Job Ads allows recruiters to automate their jobs offers by targeting specific people on Twitter whose profile correspond to the offer.

For those who prefer a more direct approach, Talent Bin by Monster analyses information published by IT professionals on the Open Web and allows recruiters to easily engage with these professionals who may be a good potential match for the company's needs.

Every and each of our solutions has one goal: to reduce time passed by the HR team in their approach towards finding professionals talent, and to maximize their ROI...

Gilles Cavallari
General Director Monster France, Espagne, Belgium and Luxembourg.

THE FREEDOM TO CHOOSE

"Organizations everywhere are realizing the potential that Mac brings to their employees, by giving them the freedom to use the tools they already know and love"

IBM is transforming the workplace by integrating existing Apple devices of employees into the business, and rolling out new Apple devices as a standard refresh option for employees who wanted them. What became known as the Mac@IBM initiative, allowed staff to quickly, easily and securely gain network access, connect to email and download business applications. We observe that at IBM more than 60% of employees choose an Apple device.

The business benefits of doing so were not only immediate, they were significant. IBM now has 150,000 MacOS and iOS devices connected to the business (IBM is deploying 1,900 Macs per week), and the ease of use means just 5% of Mac users are calling IT support, compared to the 40% of PC users which do.

With the business transformation taking place, Mac@Work is the catalyst driving engagement and user experience where Apple provides the best end-user experience, and IBM provides the best deployment and enablement solutions.

"A breath of fresh air for IT"

End users want device choices at work and they expect seamless access to information and personalized support. At IBM, we describe this as the Superior End User experience. For clients to be able to provide this experience and meet the growing demands of the work force, they must start to offer choices in devices. This could be provided by a bring-your-own-device (or BYOD) program, or by a corporate program which expands past Windows devices and also offers Macs. Today's digital workforce wants to use Mac devices to be productive at the office and on the go. Companies want to attract the right talent and boost employee satisfaction and are rethinking their approach to the the workplace.

IBM's journey has demonstrated significant opportunities to transform the end user experience. From how to order the device, configure, manage, support and disposition – translating into an entirely new life-cycle approach. The approach also liberated IT as there's no need for IT to install additional tools or lock down functionality for employees. And with an automated zero-touch deployment process, they don't even have to open the box before roll out, allowing employee to retain the full intended Apple experience.

The insights and expertise IBM gained has led to the launch of IBM Managed Mobility Services for Mac, integrating OS X devices into your digital workplace smoothly and securely while offering a personalized experience for your users.

This complete end-to-end solution helps establish and maintain governance for OS X devices, enabling over-the-air and zero-touch configuration, as well as full enterprise integration for BYOD programs and corporate-owned devices

“Between lower support costs and higher residual values, every Mac we deploy makes and saves money for IBM”
Fletcher Previn, VP of Workplace as a Service, IBM

IBM would like to share benefits our transformation and give you some inspiration around how you might also embark on this journey. For more information, please contact Tom de Vries:

Awards
- more than 12.000 downloads

The best way to learn anything is the one that suits you best.
For me, it is all about taking pleasure in learning something new.
One must be able learn with the least hindrance possible, because hindrance is the baggage that drives you away from knowledge.
Gamification offers this kind of flexibility. The learning approach merges with a game scenario and the content becomes a game itself.

Gamification is very effective for promoting corporate culture and backing more sensitive processes such as HR evaluation feed-back and change management.

The first gamification that LaSauce developed was an application to promote learning Luxembourgish.

Having to learn pages and pages of vocabulary can indeed be really boring and off-putting. On top of that, if you don't use a language daily, you can forget words and are forced to relearn certain things.

Learning a new language by gamification consists of creating a visual link between an object and what it is called in a foreign language, without having to translate. The object itself acquires a new synonym, a new identity…

So far, LaSauce has already published 2 gamification apps on AppStore and Google Play: BattaKlang to learn 1.000 Luxembourgish words and BattaKing to learn 1.000 English words.
French is used in both apps for support and if needed, to translate.

The apps are available for private use and are also ready for corporate use.
Is your staff hesitant in English ? The voice version of BattaKing can help them expand their vocabulary day by day whilst keeping you informed about their progress.

AGEFI Luxembourg est un journal mensuel traitant essentiellement l'actualité économique et nancière luxembourgeoise et européenne.
AGEFI Luxembourg est le premier périodique de l'UEBL (Union Economique Belgo-Luxembourgeoise), crée en 1988. Le lectorat d'AGEFI Luxembourg est principalement composé de professionnels de la finance et de l'économie (banquiers, agents de change, gestionnaires, assureurs, private bankers, asset managers, institutions publiques, etc.) et d'autres prestataires de services (informatique, télécom, leasing, ressources humaines, audit, conseil, immobilier, etc.).
LE MENSUEL EST DIVISÉ EN PLUSIEURS RUBRIQUES :
- Finance/Economie
- Banques
- Vie des sociétés
- Informatique
- Conférences - Formations,
- Nominations et promotions de cadres supérieurs.

Chaque mois, le mensuel se focalise également sur plusieurs dossiers déterminés tels que la sécurité informatique, l'assurance-vie, les fonds d'investissement, le private banking, l'immobilier, l'audit, la consultance, etc. suivant un plan annuel envoyé aux annonceurs.

Leaders League is a leading French media and consulting group specialized in Strategy, Finance, Law. We deliver strategic information for decision making to more than 15 000 international leaders. We bring knowledge by offering unique products and innovative solutions in particular with a magazine and a collection of annual guides-directories. Décideurs - Stratégie Finance Droit is a monthly magazine and a reference for CEOs, senior managers and key decision-makers in finance and law. 16,000 copies are published monthly to meet the needs of its 50,000 readers. In addition, we have at your disposal a newsletter sent to them every week.

Each month, DECIDEURS deciphers and tracks trends and strategies in the world of economics, finance and law, providing insight from leading specialists.

In addition to its monthly magazine, we edit a collection of Intelligence Report & Directory Series which provides in-depth analysis and exclusive rankings to the leading market players worldwide. Every sector and every management issue is analysed structurally, from M&A, Innovation, Tax, Litigation & Arbitration to HR and Social law, the Media industry or the Health sector.

Finally, Leaders League organizes throughout the year several events, in France and abroad: Les Trophées Leaders de la Finance – Les Trophées du Droit – les Victoires du capital Humain – le Grand prix des Entreprises de Croissance – The G20 Strategy & Management Summit – The International Legal Alliance Summit & Award – The Private Equity Exchange and Award.

DEUTSCHER OUTSOURCING VERBAND E.V. (GERMAN OUTSOURCING ASSOCIATION)

Stephan FRICKE
CEO, Head of the Advisory Board
office@outsourcing-verband.org

Foundation date
2010

The Deutscher Outsourcing Verband (German Outsourcing Association) is one of the biggest independent and non-commercial networks for ITO and BPO professionals and organizations in Europe. With more than 600 members, nearly 10.000 subscribers and contacts, several web services, extensive social media presence and communication capabilities the association has a communication output of more than 260.000 contacts. Via our publications, such as the Outsourcing Journal, the Destination Guides, with our education program and events our members and partners gain access to market information, best practices, expert knowledge and skills that help to better evaluate and implement ITO/BPO projects.
As a non-profit organization we create numerous opportunities that give impulses for the development of the market for ITO and BPO services in Germany, Austria and Switzerland. With our initiatives we increase transparency and trust in co-operations with external ITO and BPO services providers and foster cross-boarder co-operations and investments. More information and free personal membership as well as opportunities for commercial organizations to demonstrate their engagement under: www.outsourcing-verband.org/en

RÉGIONAL-IT

Brigitte DOUCET
editor - publisher
brigitte.doucet@scarlet.be

Foundation date
2012

Staff
Staff in Europe: 3

Régional-IT est un média en-ligne dédié au monde de l'IT et du numérique, un espace d'information et de visibilité centré sur les projets, acteurs, réalisations et problématiques qui touchent plus particulièrement la partie francophone du pays - Bruxelles et Wallonie. A découvrir sur le site http://www.regional-it.be.
Le média a choisi de se concentrer sur la partie francophone du pays - Wallonie et Bruxelles - pour mieux mettre en lumière et faire connaître les solutions et les innovations locales, trop souvent méconnues, et pour parler des problématiques et initiatives qui s'y font jour.

Média indépendant, lancé mi-2012 à l'initiative de journalistes indépendants, Régional-IT ambitionne de recréer un espace où l'information n'est pas contrainte par des considérations de longueur ou d'instantanéité.

A la barre: trois journalistes qui ont à leur actif de nombreuses (parfois très nombreuses) années d'activité dans le domaine de l'informatique et des (télé)communications. Le média publie à la fois des articles d'actualité, des profils d'acteurs, des usages et cas pratiques d'utilisations, des tribunes qui donnent la parole à des experts et professionnels du secteur IT/numérique, et des dossiers thématiques.
Il se double d'une newsletter hebdomadaire gratuite, reprenant les principales informations de la semaine.

SME4SPACE is a Panel of Space SME Associations of the ESA Member States and ESA cooperating States. SME4SPACE was founded in 2007 and officially launched on 19 June 2007 at the International Paris Air Show, Le Bourget. On that day ESA General Director J. J. Dordain signed a Memorandum of Agreement formalising cooperation between ESA and SME4SPACE.

The aim of SME4SPACE is to voice Space SMEs' viewpoint in an organised and coordinated way and to facilitate the access of SMEs to space activities in general and to ESA programmes in particular.

More in detail the organisation pursues the following not for profit purposes:
- defining and defending common positions, representing the SMEs towards public authorities i.e. the European Space Agency, the European Commission and its related agencies;
- organising seminars and information sessions;
- organising a network of SMEs in order to increase the possibilities to cooperate;
- carrying out research projects, participating at National, European and International calls in space and related activities.

ISACA: What we offer and whom we serve

ISACA is an independent, nonprofit, global association engaging in the development, adoption and use of globally accepted, industry-leading knowledge and practices for information systems.

With more than 200 chapters in over 80 countries, ISACA provides its members with education, resource sharing, advocacy, professional networking, and a host of other benefits on a local level. ISACA members cover a variety of professional IT-related positions ranging from IS auditors to consultant, educator, IS security professional, risk professional and CISO. ISACA constituents (over 140,000 professionals worldwide) work in all industry categories, from banking and finance to the public sector and manufacturing.

ISACA Luxembourg chapter is over 250 members strong.

State of Cyber Security 2016

ISACA and RSA jointly released in 2016 the results of their collaboration to bring you the latest findings and thoughts from cyber professionals around the world.

Threats are growing and evolving in sophistication. As the rate of incidents continue to escalate, the magnitude of related brand, reputation and fiscal impact is driving organizations to address cybersecurity risk in new ways.

Compare your organization to that of your peers with the report by downloading your FREE copy from ISACA.
